Name: Chelsea Shaira E. Tibudan

Pop-up Exercise:

To access the editable code for the exercise in CSS sizing. Visit the web URL below.

Task: In the example below, we have used the same image three times. Explain the difference in size of the image in each block based on the CSS rulesets.

```css
.box {
        border: 5px solid teal;
        margin:5%;
        width: 200px;
}
.minibox {
        border: 5px solid teal;
        margin:5%;
        width: 50px;
}
.width {
        width: 100%;
}
.max {
        max-width: 100%;
}
```

```html
<div class="wrapper">
  <div class="box"><img src="path/valo.png" alt="valo" class="width"></div>
  <div class="box"><img src="path/valo.png" alt="valo" class="max"></div>
  <div class="minibox"><img src="path/valo.png" alt="valo class="max"></div>
</div>
```

[Block 1] (.box) has a width of 200px however it is set as class width of 100%

Whereas [Block 2] the second box is specified by max that is max-width of 100%

[Block 3] (.minibox) has a width of 50px and a max width of 100% only.
